Effective Investment Pitch Deck Preparation

Ir Prof Alan Lam, JP

Powered by Poffices.AI

Outline of the Course

Chapter 1: Introduction to Pitch Deck Preparation

Ir Prof Alan Lam, JP

Powered by Poffices.AI

Who are audiences of Pitch Deck?

What are their preferences and behaviors?

What is the purpose of Pitch Deck?

What is expectation of Investor?

How to attract Investors?

What is the method to support your idea?

How to show the impact and potential?

Why your idea will be successful?

What are your project milestones?

What is your offer?

Chapter 2: Structure of Professional Pitch Deck

Ir Prof Alan Lam, JP

Powered by Poffices.AI

Cover to show the product

SmartARM AI Robotic

Automation Solutions for Small and Medium-Sized Warehouses.

Traction / Production Statement / Introduction

Bloomate: Let 120 MILLION high-pressure workers "blossom and make money"

"Emotion × Efficiency" Twin Engine, Refactoring desktop productivity

Everyone likes to browse all kinds of things on their computer desktop, especially flower pots!

Why not = combine them together?

Bloom + Mate = Bloomate

From one of the favorite childhood games for young people nowadays - "Moore's Village". The companion pet in this game has moving ears and can talk. Everyone hopes to be able to have one of their own!

We are...

- **redefining the relationship between humans and machines:**
  - Machines should not merely be cold tools; they should have warmth, like plants, and grow along with you.
- **eliminating the awkwardness of technological hardware, seamlessly blending into the office environment.**
  - The biggest surprise is - it doesn't look like a human robot at all!
- **Advancing:**

SUSTAINABLE DEVELOPMENT GOALS

SDG 8: Decent Work, through burnout reduction and productivity enhancement

SDG 3: Well-Being, via mental health promotion

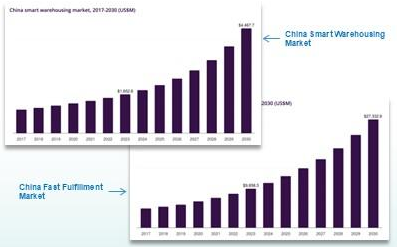

3

Vision: SmartARM enables sellers with small to medium-sized warehouses to implement automation upgrades to meet the growing demands of fast fulfilment.

SmartARM

1 Fast Fulfillment & Warehouse Automation Market

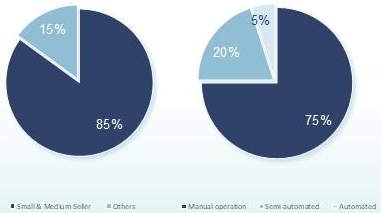

- The growth of the warehouse automation market to meet consumers' fast-fulfillment demand, with the fast-fulfillment market expected to reach **US$27,332.9 million** and the warehouse automation market projected to reach **US$4,467.7 million** by 2030.

2 SME-Dominated Market with Predominantly Manual Operations

- Within China's e-commerce sector, **75%** of warehouses rely on manual labour, resulting in inefficient operations. This stems from the fact that the majority of sellers are small and medium-sized enterprises, unable to bear the costs of warehouse automation upgrades.

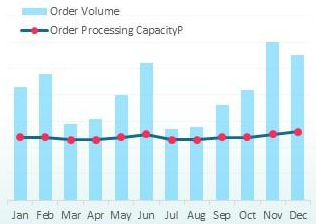

E-commerce Seller Composition and Warehouse Operation Modes in China

3 Manual Capacity Falls Short in Peak Seasons

- During peak shopping seasons, order volumes surge by several times and exceed the upper limit of manual processing capacity, leading to shipping delays, **slower fulfillment**, and a poorer customer experience.

Monthly Order Volume vs. Manual Processing Capacity

Problem: Heavy reliance on manual operations prevents SMEs from handling peak order surges, undermining fast-fulfillment performance.

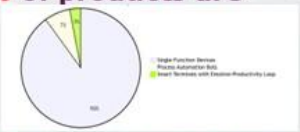

Problem Statement and Pain Points

Problem Statement

The modern workplace faces a critical dual challenge: mental health deterioration and productivity collapse. Recent data reveals 78% of professionals experience significant daily stress, with high-frequency sectors reporting up to four acute anxiety episodes daily. Simultaneously, constant interruptions have reduced average effective focus time to **2.8** hours - far below the **8** hours industry standard. [1]

- **Alex, a backend developer.**
- By 6 PM, he's had **4 acute anxiety spikes**.
- Smart watches suggest that **78% of depression exceeds the standard**, and the effective concentration time decreases daily.
- Desktop clutter has no effective mood relief tools at all, **and less than 3% of products are commercially available in the market.** [1]

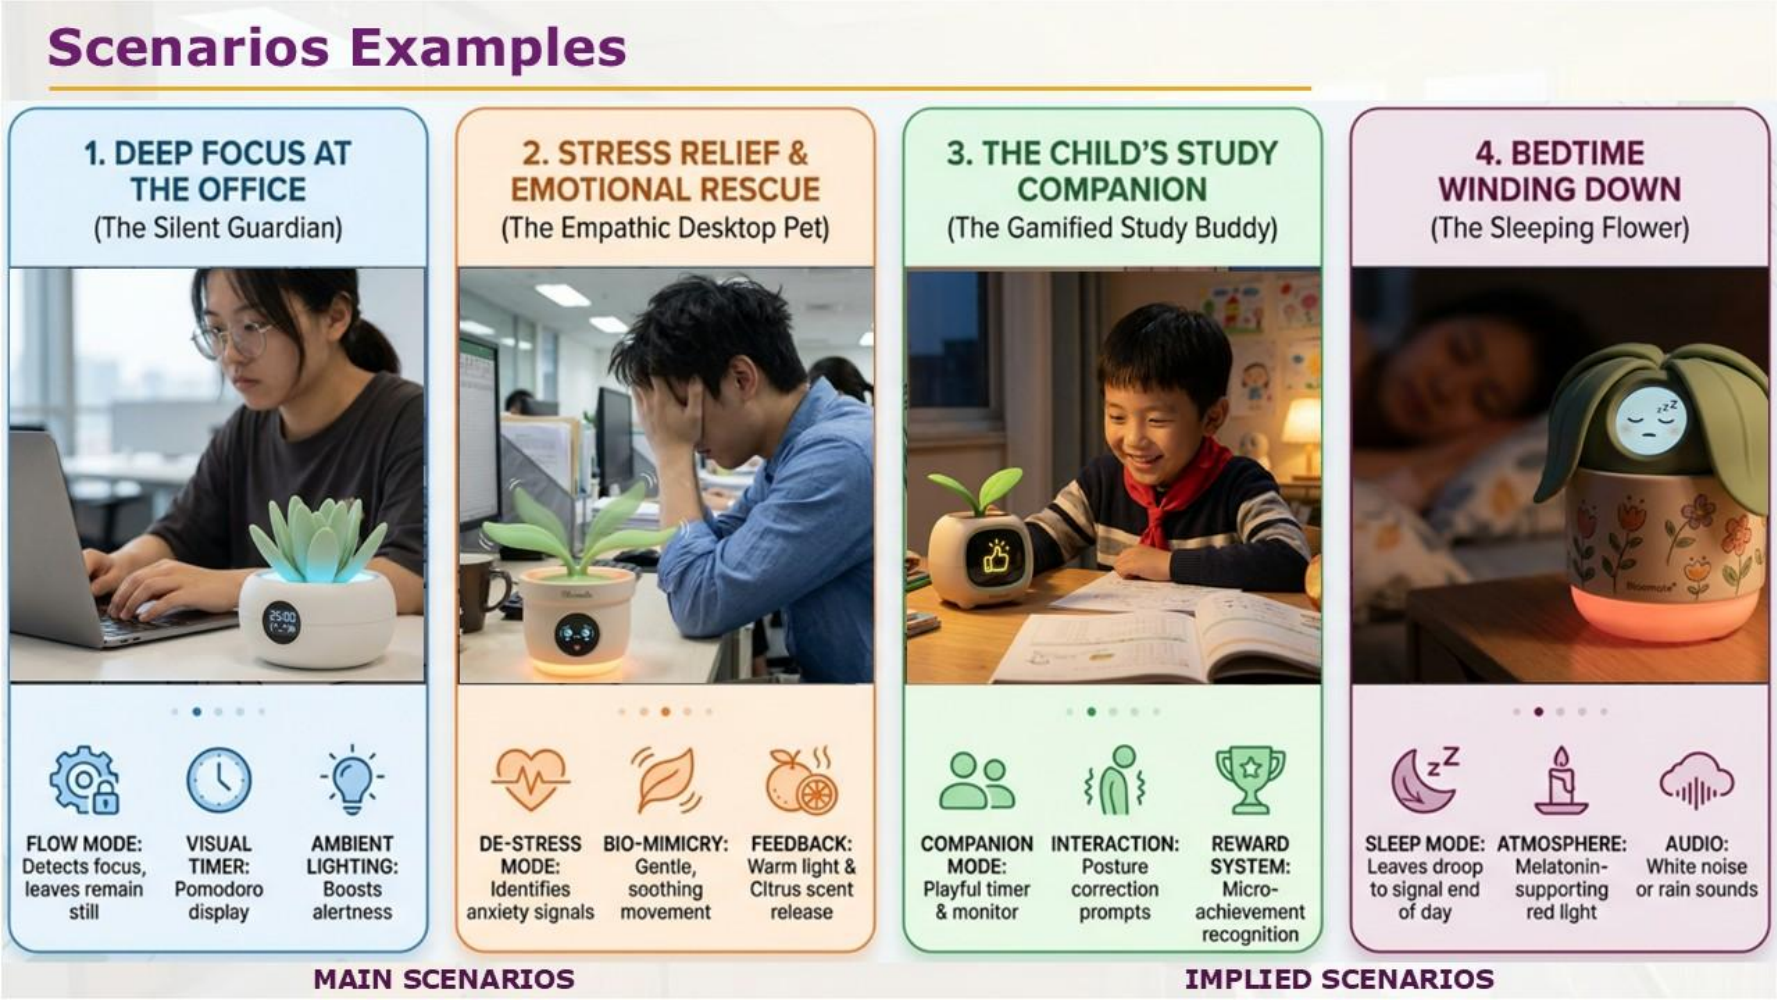

- What are his options? Counseling? Too awkward. A stress ball? Useless.
- Current market solutions are either dead objects—like lamps—or distracting screens. Alex's desk is crying for help, but nothing is listening.

We can see a massive gap for a device that offers immediate intervention.

Workplace burnout isn't just a personal feeling; it's a revenue black hole for company.

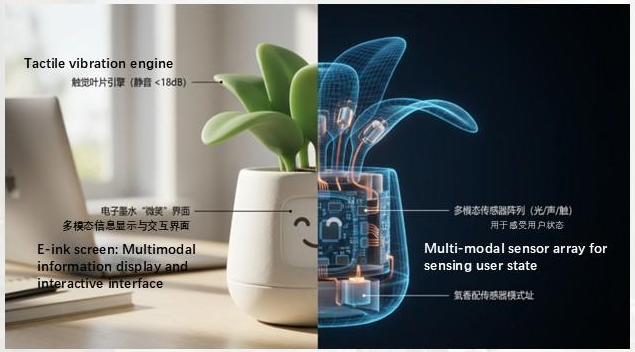

[1] Mai Mai Talent Recruitment Wisdom Hub. (2024). Report on the Current Survival Status of Chinese Workers in 2024

Scenario of Product Idea

Technology and Product & Solution

The Product Solution

The fundamental innovation of Bloomate lies in its bidirectional "Emotion-Efficiency Drive" logic. This sets it apart from conventional office hardware by delivering core value **through understanding and responding to the unspoken needs of professionals**.

Connecting with office software or OA system enables colleagues to **transfer files by simply "touching each other's flower pots", or enables the "flower watering check-in"** to be realized. It also provides enterprise managers with a more vivid visual platform for monitoring personnel status.

企业微信 钉钉

KEY FUNCTIONS

EMOTION

Emotion Recognition & Regulation
- Multi-modal recognition of anxiety signals
- Multi-sensory regulation to stabilize mood
- Prevents negative cycles through lightweight task suggestions

SOCIAL

Social & Cross-Device Interaction
- Enables colleague interaction through device connectivity
- Supports basic office functions (file transfer, clock-in/out)
- Syncs across devices for seamless workflow

AGENT

AI Agent & Micro-Interactions
- Customizable workplace personas for voice conversations
- Micro-rewards system reinforcing positive feedback loops
- Serves as both emotional support and productivity catalyst

EFFICIENCY

Efficiency Assistance via Enterprise System Integration
- **OA Connectivity:** Auto-syncs with DingTalk, WeChat Work, Feishu
- **Smart Task Management:** Role-based project decomposition
- **Focus Protection:** Priority notification filtering with wellness reminders

MANAGEMENT

Enterprise Emotion Management Dashboard
- **Team Analytics:** Department-level emotion trends and triggers
- **Smart Interventions:** Data-driven workplace optimization suggestions
- **Professional Support:** Automated EAP integration for at-risk employees

Solution: lightweight warehouse automation system tailored for SME sellers, over **60%** improvement in outbound efficiency and **80%** reduction in labor costs, significantly lowering operational expenses.

SmartARM

SmartARM Hardware Module

Smart Picking Robot

A mobile robot that autonomously navigates aisles, identifies items, and completes picking tasks with integrated perception and robotic manipulation.

- 3D Vision + LiDAR Perception
- AMR Autonomous Navigation
- 6-DoF Robotic Manipulation
- SKU Recognition & Pose Estimation
- ROS2 + Edge Control System

Smart Packing Pod

An autonomous packing station that scans, plans, forms, seals, and labels each parcel with AI-optimized precision.

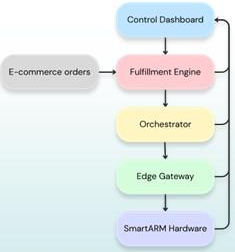

- AI Packing Optimization
- Auto Box Cutting & Forming
- Automatic Sealing & Labeling

SmartARM Software Module

SmartARM WFMS (Warehouse & Fulfillment Management System)

WFMS unifies order management, robot fleet orchestration and smart packing control.

- **Fulfillment engine:** breaks down e-commerce orders into executable tasks;
- **Orchestrator:** assigns them to Smart Picking Robots and Smart Packing Pods in real time;
- **Edge gateway:** connects conveyors, lights and sensors on the floor.

A live control dashboard and AI optimization layer continuously improve routes, waves and packing strategies to keep the warehouse stable even under peak-season pressure.

Team for Execution

Why Us?

World class Team

HE JIE - Chief Executive Officer (CEO)

Background & Experience: Robotics Major, CUHK; 4 years at CAICT (XR / Embodied AI industry research).

Primary Contribution: Corporate strategy, government relations, enterprise resource allocation, policy subsidy applications (HK Cyberport/Mainland).

ZOU YIJIE - Chief Financial Officer (CFO)

Background & Experience: Finance and Trade specialist from a top-tier institution.

Primary Contribution: Financial planning, fundraising strategy, and trade operations.

JIAO YANG - Chief Technology Officer (CTO)

Background & Experience: Former Colleague from Tsinghua Embodied Intelligence Team; smart devices development contributor.

Primary Contribution: Haptic Feedback System Optimization, Emotion Recognition Model Implementation, Hardware Cost Control (BOM ≤ ¥200).

LI JIAPENG - Chief Marketing Officer (CMO)

Background & Experience: Expert in robotics and smart hardware markets.

Primary Contribution: Market positioning, B2B sales channel activation, and brand management.

XU CHUYAN - Chief Product Officer (CPO)

Background & Experience: Core Designer of AI Pet project (HK Designer Con exhibitor).

Primary Contribution: Biomimetic Interaction & Industrial Design, Workplace User Experience & Need-Finding, Multi-Modal Regulation Scenario Design.

Prof. LAU Tat Ming, Prof. Alan Lam, etc. - Academic Advisors

Background & Experience: Professors from CUHK Faculty.

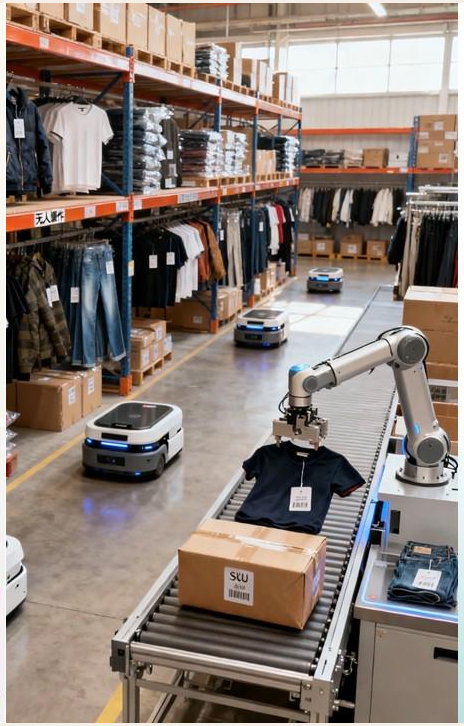

Primary Contribution: Scientific Validation of Intervention Protocols, EAP Service Resource Integration.

FROM WORLD-CLASS INSTITUTIONS

"**Triangle Genes**":
1. Technical Genes (Tsinghua Embodied Emotional AI technicians, CUHK Biometric Sensor technicians)
2. Resource Genes (CAICT employees, CUHK professional mentor team)
3. Design Genes (Hong Kong Design Week awards winners)

👉 "**Technical Validation + Shortcut Channels + Good Design Reputation**" = **Low Investment Risks**

6

Team: Strong founding team with deep expertise in robotics, AI, and market growth.

Mr Zhonghao Qi - CEO

- **MSc in Robotics**, The Chinese University of Hong Kong (CUHK)
- MSc in Digital Marketing, University of York
- BSc in Artificial Intelligence, University of Sheffield
- Co-founder, Jorvik Media Ltd

Dr Zongyou Zuo - CTO

- **Postdoctoral Researcher**, Chinese Academy of Sciences
- PhD in Mechanical Engineering, University of Sheffield
- MSc in Mechanical Engineering, University of Sheffield
- BEng in Mechanical Engineering, Queen's University Belfast

Miss Yani Lin - CMO

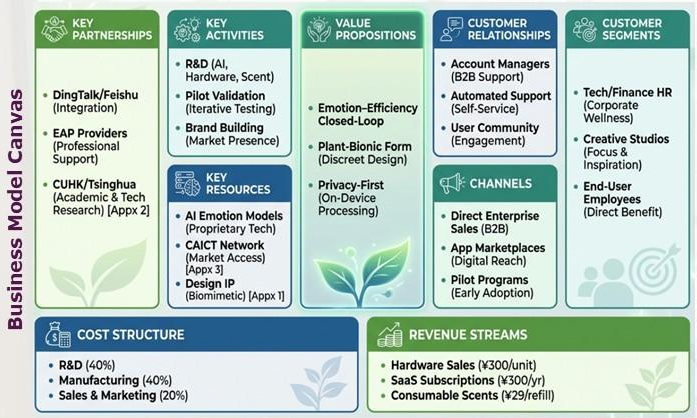

- **Founder of Jorvik Media Ltd**
- Vice President, York Chinese Association
- MSc Marketing, University of Leeds
- BA Communication, University of York

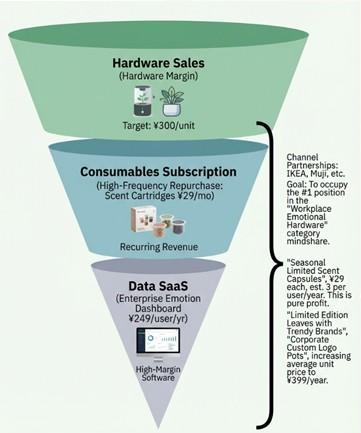

SmartARM

Business Model and Strategic Plan

Business Model

"We are not selling hardware, but rather the subscription of 'emotional value'"
Beyond Hardware + High-profit + Sustainable

Here is where we show business acumen. We are not just selling hardware. We are the **'Nespresso' of mental health**. It is not a one-time income, but a "pyramid" structure of healthy income. The IP co-signing layer lays the groundwork for "**value-added space**", reflecting the closed-loop business thinking.
Real profit apart from the hardware itself comes from:
1.Consumables: Seasonal scent cartridges (3-4x repurchase rate/year).
2.SaaS: HR departments pay for our 'Emotion Dashboard' to prevent burnout turnover. This increases our LTV (Lifetime Value) to 3x the hardware cost."

8

Business Model:
1) Selling standalone robots, including the Smart Picking Robot and Smart Packing Pot.
2) Sale of a complete, bespoke automated system as a package.
3) Annual subscription service for mobile remote warehouse management functionality.
4) Deliver our automation technology as a white-label solution to support your branded smart-warehouse offerings.

SmartARM

1 Standalone Hardware Sale

- Customers can purchase Smart Picking Robots or Smart Packing Pods as standalone devices to upgrade specific warehouse workflows without deploying the full system.

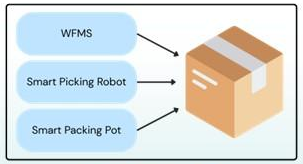

- Smart Picking Robot -
HK$112,000 / unit

- Smart Packing Pod -
HK$70,000 / unit

2 Full-stack Automation Package

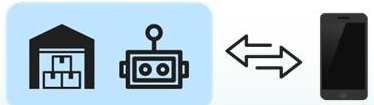

- A fully integrated warehouse automation solution combining hardware, WFMS software, and on-site deployment, customized according to warehouse size, order volume, and required robot quantity.

Small warehouse
HK$303,100 – HK$602,700
Medium warehouse
HK$902,300 – HK$1,201,900
Large warehouse
HK$1,501,500 – HK$2,100,700+

3 Remote Control Subscription

- A premium add-on service that enables users to manage warehouse operations remotely through a mobile app, including real-time monitoring, alerts, and robot task assignment.

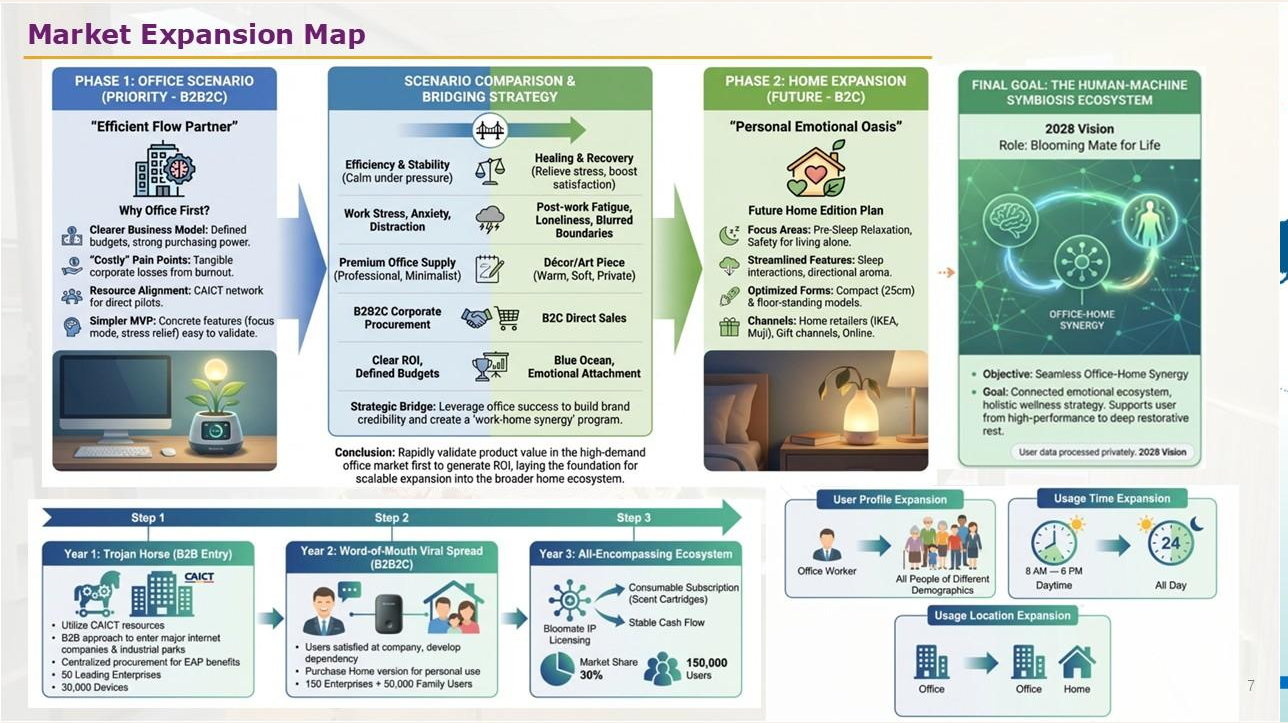

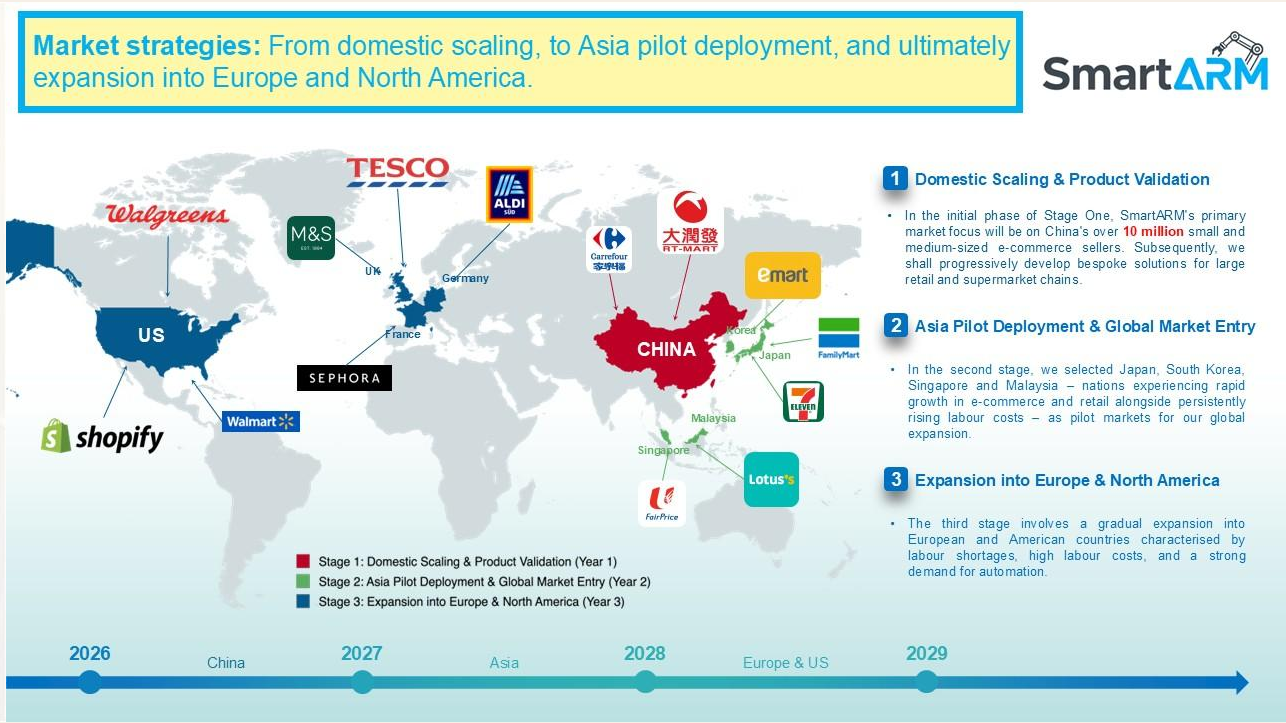

Subscription fee
HK$1599 / year

4 White-label OEM Future

- We provide our hardware and WFMS technology under the partner's brand, allowing retailers, 3PL companies, and overseas operators to launch their own smart-warehouse solutions.

Business Roadmap and Forecast

Fundraising and Offer

Financial Planning

Our financial strategy leverages a hybrid 'Razor and Blade' model designed to maximize both immediate B2B adoption and long-term profitability. We have priced the Bloomate hardware aggressively at **¥300**, strategically positioning it well within standard corporate wellness budgets to minimize procurement friction and rapidly build our installed base. However, the core of our financial engine is the **recurring revenue ecosystem**: as we scale from 5,000 units in Year 1 to 50,000 in Year 3, the high-frequency purchase of **consumable scent cartridges** and high-margin **SaaS data subscriptions** will drive a 'Flywheel Effect.' This shift optimizes our revenue mix over time, allowing us to transition from a hardware-dependent income stream to a sustainable, high-margin business model.

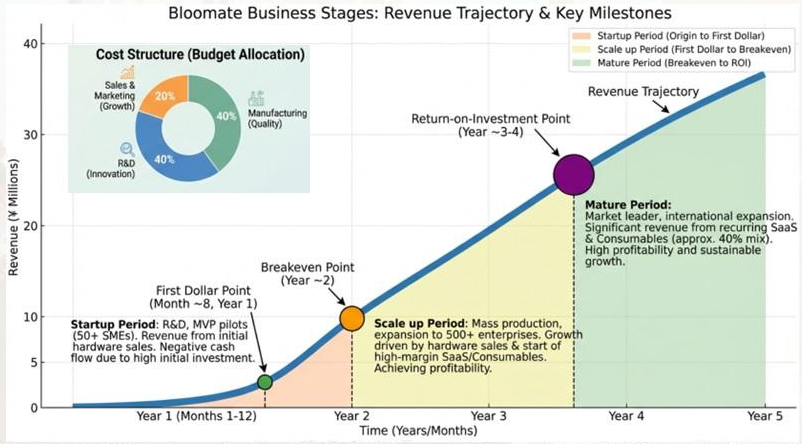

Hardware Terminal (B2B/B2B2C)
¥300 / unit (incl. 1-yr basic SaaS). Low entry barrier, fits corporate wellness budgets.

Recurring Consumables (High Margin)
Scent Cartridges: ¥29 / unit (Est. 3-4/yr/user).
Varieties: Focus, Relax, Creativity.

Enterprise Customization (Premium SaaS)
Up to ¥399 / user / yr.
Branded hardware, emotion analytics dashboard.

Initial Pricing

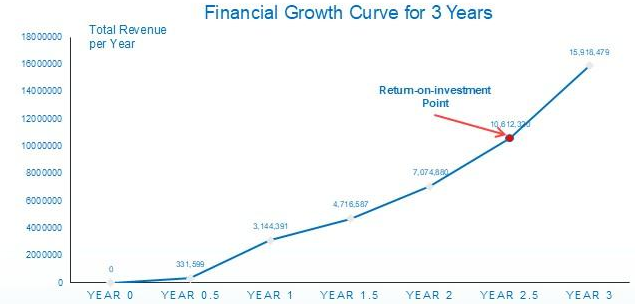

With 5 million RMB this round, primarily to fund mass production molds and fulfill our initial batch of B2B deliveries. Based on our current LOIs, we project to become cash-flow positive within 12 months.

Financial & Offer: 5-month revenue, 11-month breakeven, 3-year HK$15.9M trajectory, seeking HK$2M for mass production and commercialization.

SmartARM

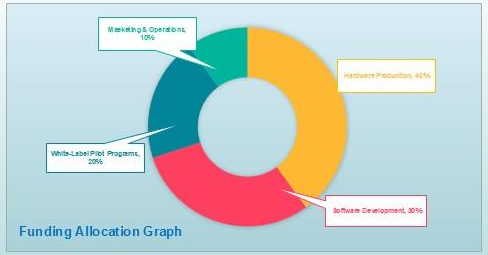

1 Financial Forecast

- The **First Dollar Point** will be reached in the **5th month**, marking the transition to positive revenue generation; the **Breakeven Point** will be achieved in the **11th month**, completing the initial break-even.
- revenue will reach approximately HK$7.07 million, surpassing HK$10.61 million within around **30 months** to achieve the **return on investment (ROI)** threshold.

2 Funding requirements

- The target amount for this funding round is **HK$2 million**, primarily allocated towards completing the mass production and commercialisation of our core product.

Case Study 1: NerOcean

NerOcean is a sensor company to provide cost-effective solution for sustainable environmental monitoring and management. The uniqueness of NerOcean's sensors are to reduce the sensors cost by 80% and maintenance cost by 90%. With our sensors, we can convert the point measurement limited by the current methods into 3-dimensional high-resolution monitoring of a large water body with less maintenance cost, especially in remote areas. We are collaborating with AFCD and the State Key Laboratory of Marine Pollution (SKLMP). We will provide our sensors to AFCD for aquaculture zone water oxygen monitoring and SKLMP for their marine research at >100 major estuarines over the world under their UN-endorsed 10-year project.

Lecture 12) Startup Pitch Deck

Case Study 1: NerOcean

The new generation of sensors

A cost-effective solution for sustainable environmental monitoring and management

NerOcean

Email: support@nerocean.com

Team and Advisors

Management team:

Ron NG – *Co-founder, Director, Chief Scientist*
Ph.D. in Chemistry (CityU)
- In charge of business direction and product development

Ivy HO – *Senior Research Associate*
Ph.D. in Environmental Studies (EdUHK)
- Focus on the analytical method development.

Sam Cheng – *Senior Research Associate*
Ph.D. in Physical Chemistry (HKU)
- Oversee the core technology and sensor development.

Allison ZHONG – *Assistant Engineer*
BEng in Electrical Engineering (CityU)
- Development of prototypes (software).

Advisors:

Prof. Rudolf WU S.-S. – *Co-founder*
Marine Scientist
Advisor (SES, EdUHK)
Founding Director - State Key Lab of Marine Pollution, SKLMP
Director - Regional Centre of Excellence, PEMSEA (United Nations)
Member -National working group on Ecological Assessment and Management of China Coastline (CN)
- Provides his network to promote our products to the Nation and the United Nations.

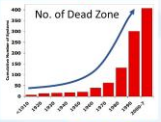

Dr. Vincent KO C.-C. – *Co-founder*
Chemist
Associate Professor (CHEM, CityU)
- Provide chemistry insight on the development of sensing methods in water quality measurement.

Dr. LEUNG C.-F.
Chemist
Associate Professor (SES, EdUHK)
- Provide professional advice on the oxygen generation technique.

Pain Points

Hypoxia (缺氧) is an imminent global environmental problem!!

$$
$$$

Continuous long-term oxygen monitoring is limited with high maintenance cost due to biofouling.

Sensors' biofouling

The Need: Water oxygen monitoring with reduced maintenance cost!!

Solution

NerOcean
Nerve of Ocean

Our New Generation of Dissolved Oxygen (DO) Sensors
– Replaceable photo-sensing film

- New Sensing Technology.
- Permanent record
- Anti-biofouling.
- High selectivity

A solution to reduce the maintenance cost for long-term continuous water quality monitoring.

inventions Geneva Silver Medal

Top 10 Best Innovation Award Gold Medal

Competitor landscape

	NerOcean Nerve of Ocean	Clark-type Electrodes	Optical-type Sensors
Price	**Low**	Medium	Expansive
Maintenance	**> 6 months**	2-8 weeks	2-8 weeks
Calibration	**Not required**	Frequent	High calibration stability
Selectivity	**Highly selective to DO, Not affected by biofouling**	Interference by H_2S, electromagnetic **Affected by biofouling**	Interference by H_2S, electromagnetic **Affected by biofouling**

Lower price 80% + Reduced maintenance cost 90% + High selectivity

= 3D monitoring at affectable cost possible!

Supporting Information

Supported by SKLMP

(海洋污染國家重點實驗室)

- *Buy our sensors.*
- *Introduce our sensors to their UN-endorsed Programme.*
- *Deployed our sensors in >100 major estuaries worldwide.*
- *Introduce our sensors to universities and research institutes in >50 countries.*
- *Market extendable worldwide.*
- *Route to the international standard for DO monitoring.*

Field test at SKLMP's fish raft in Tai Tau Chau aquaculture zone.

Collaboration with AFCD

(漁農自然護理署)

- *Our technology is trusted by AFCD and EPD (環境保護署).*
- *First validation of sensors carried out at AFCD's monitoring site.*

The sensor prototype ver. 2 and new sensing films were validated at AFCD's monitoring site in the Ma Nam Wat aquaculture zone.

New DO sensing films were tested with the sensor prototype ver. 1.

Sensor prototype ver. 2 was also tested with a simple laptop interface.

Case Study 2: Meat the Next

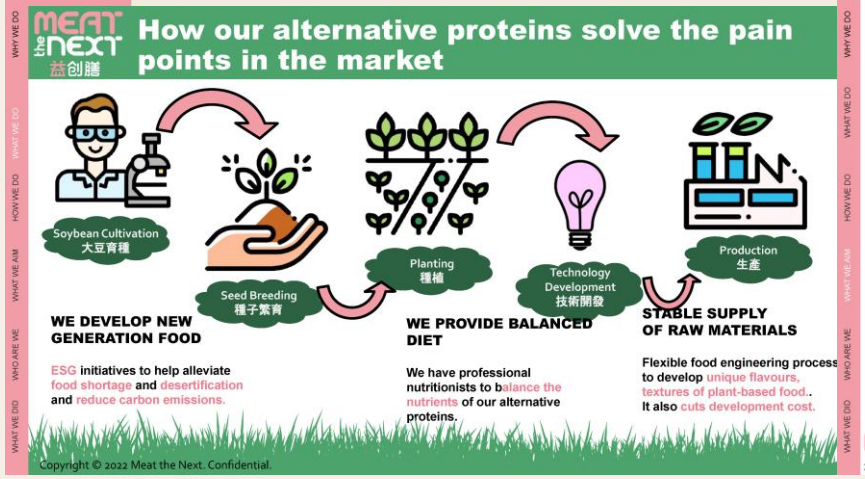

Founded in 2020, Meat the Next (MTN) specializes in plant-based food technology and aim to solve food shortages by creating New Generation Food. New Generation Food is not only a better way to feed the population, it also brings positive impact to the planet, the environment and the climate.

By introducing novel technologies, MTN plans to further explore the potential of sustainable environmental technologies and to act as an industry leader in reducing carbon emission. They will also proactively investigate the commercial potential of carbon deduction. More than just food, the technology makes sustainable lifestyle possible.

1st Product to Market

Our MVP Highlights

Uniqueness of our Products

Our Patented Technologies Transform into Healthier & Yummy products

Our Ready to Market products are not only frozen dessert...

1. Plant-based/ Non Dairy Frozen Dessert
2. Low sugar, No added sugar
3. Made with Tiger Nuts
4. Made in Hong Kong
5. No Animal Hormone and Artificial colour

Copyright © 2022 Meat the Next.

Our R&D Strategy vs Competitors

Markets need Green Label & Clean Label.
Meat the Next is ready to enter each market and satisfying market needs.

Different R&D strategies, different outcome!

Meat the Next

- **Patented enzymatic reaction**
- **Unique extraction of raw materials** — Combined a mix of plants which mimic the dairy flavors
- **Non-GMO** — Meets non-GMO food standard in China and EU
- **Market-oriented R&D** — Market players driven on R&D directions which takes consideration the needs of industry

Vs

Other brands/competitors

- Gene cloning
- Genetically modified animal protein
- Artificial flavoring & Gums

Getting ready entering China's market
